# **OIST School Aged Program Illness Exclusion Policy**

Last updated: April 2025

This document outlines the criteria by which a child who has been infected with a communicable disease can be readmitted to the School Aged Program (SAP). If a medical certificate is required to return to the SAP, parents must present a medical certificate from a physician with permission to return to the SAP upon return. For the calculation of the period of exclusion from the SAP, the day on which the criteria are met, such as lowering of fever has been observed is day 0, and the days past infection are counted starting at day 1.

#### 1. Basic rules

Symptom	When Can My Child Return to the SAP?
Fever (37.5 and higher)	Children can return to the SAP once he or she is fever-free for 24 hours (*Child should be fever-free without the use of fever-reducing medicine.)
Vomiting/ Diarrhea	Attendance may resume 24 hours after the last episode of vomiting or diarrhea. If a child has had 3 episodes of diarrhea in 24 hours, they must visit a doctor and fill out a Re-admission Report before returning to the SAP. If both vomiting and diarrhea have occurred together, the exclusion time is 48 hours.
Blood in Stool/ E Coli Bacteria	After a doctor determines that there is no longer a threat of the bacteria spreading. Please fill out the <u>Dr's Opinion Form</u> upon return. (Click <u>here</u> for Bristol Stool Form Scale, Stool Classification Index)

#### 2. Common Childhood Diseases

The following guidelines apply when a child has been diagnosed by a physician.

0.0		•	0 , 1 ,	
Disease/ Infection	Incubation Period	Symptoms	When Can My Child Return to	Document Required for
			the SAP?	Readmission
Rotavirus	1 - 3 days	Fever, diarrhea, vomiting,	24 hours after	Re-admission
Norovirus		abdominal pain, loss of	being fever-free,	Report
Adenovirus		appetite, dehydration,	vomiting or	ļ

	I	T	Т	
		decreased urination, dry mouth and throat, feeling dizzy when standing up, crying with few or no tears and usual sleepiness or fussiness, abdominal cramp, joint and muscle pain, headache, extreme tiredness	diarrhea subside, and regular meals can be taken.  (*Child should be fever free without the use of fever-reducing medicine) If both vomiting and diarrhea have occurred together, the exclusion time is 48 hours.	
Pink Eye (Conjunctivitis )	2 - 14 days	Discomfort in the eye (it may feel like sand in the eye), redness of the eye and inner eyelid, eye discharge, swollen eyelids, sensitivity to bright light	After a doctor determines that there is no longer a threat of the disease spreading.	Dr's Opinion Form
Hepatitis A Virus	15 - 50 days	Nausea, vomiting, diarrhea, jaundice, fever, abdominal pain	1 week after the onset of symptoms.	Re-admission Certificate
RS Virus Infection (Bronchiolitis)	4 - 6 days	Coughing with or without mucus produce, soreness in the chest, exhaustion, mild headache, mild body aches, watery eyes, sore throat	After the serious cough subsides and all body symptoms are gone	Re-admission Report
Pneumonia	14 - 21 days	Dry cough, chest pain, fever, trouble breathing	After the serious cough subsides and is fever-free for 24 hours	Re-admission Report
Fifth Disease (Erythema Infectious)	4 - 14 days	Fever, headache, runny nose, rash	After symptoms (except for the rash) are gone, fever-free for 24 hours and in good health condition overall	Re-admission Report
Croup	1 - 4 days	Cold symptoms like	After the cough	

	-	T	I

## 3. Category 3 Infectious Diseases

Cholera, Bacillary Dysentery, Typhoid Fever, Paratyphoid, Enterohemorrhagic E. Coli Infection, Epidemic Keratoconjunctivitis, Acute Hemorrhagic Conjunctivitis, any other infectious disease identified by the Ministry of Health, Labor, and Welfare.

When a category three infectious disease occurs, the children will be excluded from the SAP until it is determined by a physician that there is no further risk of infection based on an up-to-date diagnosis. \*Medical certificate will be required for readmission.

# 4. Category 2 Infectious Diseases

The following guidelines apply when the child has been diagnosed by a physician.

Disease/	Incubation	Symptoms	When Can My	Document
Infection	Period		Child Return to	Required for
			the CDC?	Readmission
Influenza	1 - 4 days	Fever, joint and muscle	5 days (6th day)	<u>Influenza</u>
		pain, headache, extreme	after the onset	<u>Progress</u>
		tiredness, dry cough, sore	and 72 hours	Report
		throat, runny or stuffy	after being fever-	
		noses, chills	free (*child	
			should be fever-	
			free without the	
			use of fever-	
			reducing	
			medicine) Paren	
			t must fill out and	
			submit an	
			influenza progress	
			report and submit	
			it to the SAP	
			office before he	
			or she will be	
			admitted back.	
COVID-19	5-14 days	Fever, respiratory	5 days (6th day)	COVID-19
	(*Median	symptoms, headache,	after the onset	Readmission
	incubation	extreme tiredness,	and 24 hours	Report
	period for	gastrointestinal	after the	
	the	symptoms, runny nose,	symptoms have	
	Omicron	loss of taste and smell.	subsided.	
	variant is 3	Some infected people do	If asymptomatic,	

	days)	not develop any symptoms (asymptomatic)	children can be readmitted to the SAP after 5 full days (6th day) from the day they test positive.	
Whooping Cough (Pertussis)	7 - 10 days	Runny nose, low-grade fever, mild occasional cough, apnea - a pause in breathing (in infants), rapid coughs followed by a high pitched "whoop" sound, coughing fits, vomiting during or after coughing fits, exhaustion (very tired) after coughing fits	5 days after appropriate antibiotic treatme nt has been completed	Dr's Opinion Form
Measles	8 - 12 days	High fever, runny nose, red and watery eyes, cough, white spots inside cheeks, red rash on the body	4 days after onset of rash and 72 hours after being fever-free	Dr's Opinion Form
Mumps (Epidemic Parotitis)	16 - 18 days	Headache, loss of appetite, low-grade fever, parotitis (inflammation of glands), pain in the neck area, continual low to high fever	5 days after onset of symptoms and in good health condition overall	Dr's Opinion Form
Rubella (German Measles)	16 - 18 days	Low-grade fever, headache, mild pine eye (redness or swelling of eyes), general discomforts, swollen and enlarged lymph nodes, cough, runny nose	After the rash is gone	Dr's Opinion Form
Chicken Pox (Varicella)	14 - 16 days	Rash (fluid-filled with blisters), fever, tiredness, loss of appetite, headache	After all sores have dried and crusted (usually 6 days)	Dr's Opinion Form

Pool Fever	2 - 14 days	Red eyes, sore throat,	48 hours after all	Dr's Opinion
(Pharyngoconj		high fever, headache, loss	symptoms are	<u>Form</u>
unctival fever)		of appetite, watery eyes,	gone	
		eye discharge		
Tuberculosis	28 - 42	Unexplained weight loss,	After a doctor	Dr's Opinion
	days	loss of appetite, fever,	determines there	<u>Form</u>
		fatigue	is no longer a	
			threat of the	
			disease spreading	
Meningocooco	2 - 4 days	Stiff neck, high fever,	After a doctor	Dr's Opinion
al Meningitis		sensitivity to light,	determines that	<u>Form</u>
		confusion, headaches,	there is no longer	
		and vomiting. In infants, a	a threat of the	
		bulging fontanelle and	disease spreading	
		ragdoll appearance are	*Medical	
		commonly found. Less	certificate	
		common symptoms are	required	
		hemorrhagic rash and		
		rapid circulatory collapse.		

# 5. Category 1 Infectious Diseases

Ebola Hemorrhagic Fever, Crimean / Congo Hemorrhagic Fever, Smallpox, Hemorrhagic Fever of South America, Plague, Marburg Disease, Lassa Fever, Polio (Acute Myelitis), Diphtheria, Severe Acute Respiratory Syndrome (SARS) Coronavirus, Middle Eastern Respiratory Syndrome (MERS) Coronavirus, Avian Influenza, New Influenza, and any serious emerging infectious disease identified by the Ministry of Health, Labor and Welfare.

When a category one infectious disease occurs, the OIST Business Continuity Plan (BCP) for Pandemic Influenza and Emerging Infectious Disease is applied.

## 6. Hygiene control in the SAP

Hand washing has been identified as the major way to prevent the spread of all communicable diseases. Children will be required to wash their hands upon entering the building, after toileting, before meals and snacks, before and after use of the water table and after messy activities. They will also be required to wash their hands after sneezing, wiping their noses, etc.

Staff and parents entering the facility will follow these practices to prevent the spread

of disease and to model proper health practices for the children

## When to wash hands

- Entering the classroom
- · Before, during, and after preparing food
- Before and after eating
- · Before and after treating a cut or wound
- · After using the toilet
- · After blowing your nose, coughing, or sneezing
- · After wiping a child's nose, and/or assisting in wiping bodily fluid
- After touching garbage

# SAP handwashing procedure

- 1. Wet your hands with clean running water
- 2. Apply soap
- 3. Wash the palm of your hands
- 4. Wash the back of your hands
- 5. Wash your fingers and between your fingers
- 6. Wash your thumbs
- 7. Wash the tip of your fingers and nails
- 8. Wash your wrists
- 9. Rinse your hands well under running water
- 10. Dry your hands using a clean/ disposable towel
